## HM-18 Series Anti-POP Filters

The HM-18 Series of high-quality studio sound screens are specifically designed to minimize the "POP" noises in vocal performances. These sound screens are a recommended accessory for any professional studio when miking close-in vocal performances.

HM-18A

5/8" X 27T Female Connector

The HM-18A consists of 2 layers of nylon silk screens tightly stretched on a frame with a small space in between. The air space between the layers significantly reduces "POP" noises while not interfering with the high-frequency response of the microphone. It is easily mounted and removed with the attached 5/8" x 27T female adaptor.

HM-18B

5/8" X 27T Female Connector

The HM-18B is similar to the HM-18A but has a fine carbon-steel mesh in each of the 2 layers instead of nylon. It gives an excellent anti-POP performance while not affecting the high-frequency response of the microphone and is also easily mounted by means of the attached 5/8" x 27T female adaptor.

HM-18AG

The HM-18AD consists of a dual-layer nylon silk screen anti-POP filter attached to an 11 3/4" flexible gooseneck with an HM-12A multi-purpose clamp for easily attaching to stands, desks, etc. The HM-18AD anti-POP filter comes in a sturdy case with one extra nylon anti-POP filter included.

The HM-18AG comes in a sturdy plastic case and consists of one each of the HM-18A and HM-18B anti-POP filters, an 11 3/4" flexible goose-neck, a 5/8" x 27T male to female connector and a thumb screw-adjustable clip. The gooseneck can be mounted or clipped to a mike stand or any surface with an edge by means of the included clip. The anti-POP filters are easily mounted on the gooseneck by means of the 5/8" x 27T male connector on the other end.

Recommended Accessories  
for HM-18A/18B

Model: G-5

The G-5 is an 11 3/4" flexible metal gooseneck with a 5/8" x 27T female adaptor on one end and a 5/8" x 27T male adaptor on the other. The G-5 and the HM-12D Series of gooseneck clamps are highly recommended accessories for both the HM-18A and B.
