

## Specifying Wireless Frequencies - 200 Series VHF

All Mipro Wireless VHF products are FCC approved and operate on FCC designated itinerate frequencies in the 169-174 MHz band or on frequencies in the 174-216 MHz. VHF band (TV Ch.'s 7-13).

Please select a VHF frequency from the following Frequency Selection Chart.

To order specify the stock number for the model and frequency selected.

**SIMPLE IS BEST. MIX & MATCH FREELY - ALL MIPRO FREQUENCIES ARE COMPATIBLE**  
across all Mipro models & series, affording maximum flexibility and ease of use.

As with any VHF wireless system, be mindful to avoid choosing any wireless frequency that falls within the channel of any Broadcast TV stations that are transmitting in your local area. (This does not apply to local cable TV channel designations).

### Frequency Selection Chart

Local Television Channel	VHF Frequency Range	MR-212 Receiver	MR-222 Receiver	MR-212 Receiver	MR-222 Receiver	MH-202	MH-206	MT-103

<b>MAXIMUM # COMPATIBLE</b>		18	16	18	16	18	18	18

#### TIP:

Generally, it also helps to NOT mix different wireless system brands as each manufacturer has their own multi-frequency allocation program making it more difficult to avoid frequency incompatibility when multiple brands are used. Ideally, to ensure maximum system compatibility, use your Mipro wireless components with other Mipro Wireless. In the real world, however, this may be sometimes unavoidable. In such cases, please contact your local Sales Rep for assistance.
