

HD-660 Professional Headphones

Product description

These HD series headphones feature a closed back design intended for use in professional monitoring applications. The acoustic characteristics and drivers have been greatly improved with computer added design techniques resulting in enhanced frequency response. The HD-660 professional headphones produce a rich balanced sound with high resolution, wide dynamic range and excellent stereo imaging. Special attention has been paid to the materials and construction of the earmuffs which make them easily adjustable, exceptionally comfortable and are well suited for long sessions with less ear fatigue.

Features

- CAD designed Nd magnet system guarantees optimum sensitivity and a wide dynamic range suitable for hi-fi music appreciation to professional studio monitoring
- Solid construction and high sound pressure capability in a closed back design
- Designed with a premium headband, high quality earmuffs and easy adjustability
- Gold plated 3.5 mm stereo connector with locking gold plated 1/4" TRS adaptor
- Durable 1—3 meter coiled cable
- Rugged hard plastic storage case

HD-660 Specifications

Transducer	Closed-back dynamic Neodymium drivers
Frequency Response	10 - 30,000 Hz
Impedance	150 ohms
Input Power	100 mW at 1 kHz
Rated Sound Pressure Level	96 dB
Total Harmonic Distortion	Less than 0.2%
Rated Wearing Pressure	3.5 newtons
Net Weight	8.8 ounces
